THIS IS UNEVALUATED INFORMATION

50X1-HUM

1. Near Pét, 2 km. west of the railway station and south of the railway line Hajmasker-Pét and on the northern slope of Mount Pétihegy, a subterranean construction was observed. Large piles of recently extracted earth were seen near the project. The area was guarded by military personnel.
2. In front of the construction, that is north of the rail tracks, there was a coal mine in operation from 1943 until 1945.
3. It was learned that a Pét factory, which stopped the production of synthetic gasoline in 1949, had resumed work and that its storage tanks are guarded by Soviet troops. It is possible that the purpose of the new excavations is to increase the production capacity of this plant.
